

DISTANCE LEARNING

Product Updates

Read below for a list of updates we've implemented to assist your educators & students in virtual instruction

As the educational landscape has shifted toward digital instruction, we've adapted our product to better fit your district's distance-learning needs.

Please note that not all updates are complete and currently available. All features will be implemented during Fall 2020.

Admin Assignment Capability

Admins can distribute digital assignments and benchmark assessments across all grades at the school or district level.

Support for Hands-On Learning at Home

These new videos were designed to help teachers and students engage in hands-on learning in the virtual environment. More topics and concepts will be added throughout the fall.

Embedded Virtual Class Sessions

Teachers can launch live virtual class sessions from within STEMscopes using various online meeting tools.

New Data and Gradebook Integrations

We've teamed up with new partners—including Aeries, Infinite Campus, Schoology, and Skyward—to help teachers easily set up classes and manage grades.

Enhanced Grading and Feedback

Since more work is now completed online, we made several improvements to ensure an intuitive, efficient process for grading and feedback provision.

More Assignable Videos

Teachers can digitally assign even more videos in our STEMscopes Streaming package!

Virtual Attendance

Teachers and districts can track student attendance for synchronous and/or asynchronous instruction.

Autosave Student Work

While working on an assignment, student responses will automatically save every 30 seconds to avoid lost work.

Professional Support for Virtual Instruction

The STEMscopes Professional Development Team and the National Institute for STEM Education have created a new suite of online STEM certifications and live virtual PD sessions to support teachers with online instruction.

STEMscopes Coding

Keep students engaged in remote learning with STEMscopes Coding, which shows students how to build and share their own personalized apps using typed JavaScript code.

Upgraded Videos and Visual Glossary

We've upgraded the content featured in our Content Connections and Visual Glossary for an enhanced virtual learning experience.

These updates apply to the following STEMscopes editions: Alabama, Florida, Georgia, Mississippi, North Carolina, Tennessee, and Virginia
